

ABSTRACT

In various embodiments, explosive objects or objects suspected of being explosive may be substantially contained. A protective device for the confinement of explosive objects or objects suspected to of being explosive may include a sleeve. The axial ends of the sleeve may 5 be open. The sleeve may include a layer of blasting-mat material , splinter-proof material, and/or fire-resistant material. The sleeve may be designed to be placed in a position and remain upright to substantially enclose a suspect object resting on a surface.
